

Tips for Your Web Video Interview

Make sure you have the microphone volume right. Your playback should be clearly audible, like a natural speaking level. Learn how to speak normally to the microphone. Practice so you're sure the microphone is positioned properly for you.

Practice working with the web cam. Look directly at the web cam, when speaking. Some practice will make this feel perfectly natural. Move your seat around until you've got a good set up where you can sit naturally in front of the camera.

Relax. You need to be comfortable, and able to concentrate on the interview, not the fine points of camera operation. Practicing in front of the camera is the only way to do this.

Dress and appearance: Dress is business casual and to make you feel more comfortable check your appearance in the web cam before the interview begins.
